

MegaTrainer

The part MD-Trainers of MegaDev only deals with developing of gametrainers. In detail, that are the MegaTrainer XL (MTXL), the MegaTrainer XE (MTXE) and the MegaTrainer eXperience (MT-X). In opposition to normal cheats, which are directly supported by games and therefor are implementet by the game-developer from the beginning, gametrainer are working by changing the RAM of the games to achiev the desired effect. The special feature of the MegaTrainers are that they don't support only one game like ordinary (game-)trainer but support a lot of games. Which they are in detail you can find in the trainers-overview.If you are not familiar with gametrainers or want get an overview of a MegaTrainer you should read the corresponding FAQ.

The primary rocks of the MegaTrainer was already conceived and programmed in the year 2001. Over 7 years it was continuously advanced and was meanwhile available in 3 different languages, but as a result of the additional time needed it hasn't endured a long time. Many games and gameversion were included over the time and sometimes there we're several modifications to the code necessary to get them to work. Unfortunately there were some problems up to the end which were impossible to fix at this time in such a complex sourcecode and thus it's necessary for some games to use Alt+Tab to switch to the trainer and activate the cheat outside the game. This was a main-problem which was already detected at an early point of time and should be solved in the planed replacement, the MegaTrainer XE, with several other advancements.

If you download the trainer the first time you have to download the setup-version to install all necessary (dll-)files on your computer. For later versions you only need the update to install changed/updated files. The setup-version copies three needed dll-files to your pc which are uninstallable on demand along with the trainer.

General

This trainer was created with and for the original version of Need for Speed: Hot Pursuit 2 (NfS HP2). The supported gameversion is shown in the trainer. If a patch will be released which isn't listed in the trainer yet, we will try to make an update for this as soon as possible, because patches generally change the memory addresses and therefore the trainer does not work for other versions than indicated.

Important

All cheats were tested with the listed gameversions.

Key	ID	Cheat / Value hotkey	Value	Description
Alt + F1		elude police		
Alt + F2		points +1.000		
Alt + F3		freeze points		
Alt + F4		freeze time		
Alt + X		unfreeze all
